## **REPLACING THE HEADBAND—All Models**

The headband is all one piece construction for easy replacement.  
No tools required--installation takes only a few moments.

### **Instructions:**

Gently pull the headband protrusions out of the ear cup rubber grommets, one at a time. Pull one side slowly until it comes out of the rubber grommet and then it will be easy to remove the other side. The headband U-shaped high impact plastic is durable enough to bend enough to clear the grommet hole.

When replacing the new headband, make sure that the cables are coming out of the bottom of the ear-shell, opposite the headband when you install the new headband. Also make certain that the cables are not twisted before installing the new headband. If your headphones end up with a twisted cable at anytime just remove one side of the headband to untwist the cable.
